State Patrol-State Fire Marshals-NDEQ

Nebraska Hazardous Incident Team

FORMATION:

In 1987, three Nebraska State Agencies; State Patrol, Department of Environmental Quality, and State Fire Marshal organized a team to provide a diverse response to a hazardous materials incident.

COMMITMENT:

To act as an additional resource to assist the local and county officials during a hazardous incident.

Full time members are located state wide and trained to technician level requirements in accordance with NFPA 472 and OSHA 1910.120

Team members can assist as a liaison for contacting additional resources during an incident.

GOAL:

The NHIT team is to enhance the local resources that are on scene.

Activation of Resource Team:

Calling the nearest State Patrol Troop Area Dispatch center can activate the Nebraska Hazardous Incident Team. Team members can cover all aspects of an incident. Members are capable of responding to both fixed facilities and transportation incidents. Once members have been dispatched to a scene, they can assume several different roles at an incident. They may serve as advisors, technical support, and additional manpower or provide a “hands on approach” to controlling a leak. Each member carries an SCBA, chemical protective clothing, air monitoring equipment, decontamination equipment, plugging and patching material and tools. Individual members have expertise in select areas of hazardous material response.
